Geronimo Orozco

Guadalajara, Jalisco, México | gorozco@gmail.com | linkedin.com/in/patux

Summary

Software Engineering Manager, 10+ leading global Software Engineering teams. Experienced across Intel, IBM, and Novell, building software products, cloud-native platforms, CI/CD ecosystems, and distributed infrastructure, improving engineering efficiency and release delivery by up to 40% through automation and cross-functional leadership.

Experience

Release Manager & Quality Champion – Intel OneAPI Program

Nov 2024 – July 2025

- **Defined and established a cross-functional quality strategy and "quality gates"** for the oneAPI program, reducing software escapes and enhancing release reliability across geo-distributed teams.
- Acted as the **primary "bridge" for complex, multi-component releases,** aligning Engineering, QA, and Program teams.
- Earned the trust of Product and Marketing stakeholders by maintaining discipline and "calm under pressure" during high-stakes, multi-component releases.

Sr. Engineering Manager – Intel oneAPI Packaging Installers and Containers

Jul 2021 – Feb 2025

- **Led a global team of 20+ DevOps, developers, quality engineers, and managers,** delivering Intel's flagship installers and deployment infrastructure for oneAPI products; drove strategic planning, hiring, and cross-team organization across US, EU, and APAC.
- Delivered automated CI pipelines supporting multiple distribution channels, **improving packaging velocity by 40%**.
- **Integrated and distributed Intel oneAPI installers, packages, and containers to accelerate adoption, while** complying with security, quality, SBOM, licensing, and distribution standards
- **Technologies:** CI (Jenkins, Github Actions), Git, Python, Ansible, Bash, K8s, Docker, Intel Internal Cloud, AWS S3, JIRA, Microsoft 365, Github Copilot
- **Recognitions:** Successfully delivered major oneAPI releases (v2022.1 and v2022.2) under challenging conditions, ensuring timely market delivery and enhanced product quality and features.

Engineering Manager – Intel System Stacks

Oct 2018 – Jun 2021

- **Led** a team of **12 engineers** to design and **integrate containerized Intel's system stacks** (OpenVINO, FFmpeg, PyTorch, HPC, Databases) optimized for Intel platforms, showcasing Intel hardware for AI, Databases, and Media workloads, validated and published to Docker Hub and AWS Container Registry with high quality.
- Team growth increased by 2.8x across three teams: Development, DevOps/CI & Validation, with two additional managers and architects in their respective fields.
- **Recognitions:** Launching the Deep Learning Reference Stack to speed up development

Engineering Manager – Intel Clear Linux Project

Jan 2015 – Sep 2018

- **Lead the development of high-performance and cloud-ready OS distribution**, including support for Virtualization (KVM/QEMU), Docker, OCI, Kata Containers, OpenStack, and K8s for Clear Linux OS.
- Contributed to early versions of Clear Containers, later evolving into Kata Containers.
- Took leadership of the Mexico team, comprising ~18 software engineers.
- **Recognitions:** Delivering the first OpenStack Cloud App Hackathon in the Americas & Launching Kata Containers based on Intel's Clear Containers 3.0 technology

Cloud & Systems Engineer – Intel, Internal Cloud

Jun 2011 – Dec 2014

- Architected hybrid cloud and automation solutions for Intel Internal Cloud, serving as the lead Linux expert to bridge bare-metal provisioning with resilient cloud infrastructure.
- **Co-architected and developed Baremetal Provisioning Software for Internal teams, built** on .NET, C#, Visual Studio, Altiris, and PowerShell.
- **Designed and implemented a high-resiliency provisioning system** for the **Internal OpenStack hybrid cloud** with custom API extensions for Windows and Linux; Mentor for Linux, Git, Python, OpenStack, and CI/CD

Systems Development Specialist – IBM

Nov 2009 – Jun 2011

- Engineered and maintained high-availability infrastructure for the Web Identity Development team, specializing in automating complex AIX and cluster environment setups.
- High-Availability Management: **Orchestrated AIX and HACMP clustering to ensure 24/7** uptime for Web Identity systems through robust DB2, MQ, and WAS BKMs.
- Infrastructure Automation: Accelerated environment management by automating installation, configuration, and updates for middleware stacks and system clusters.

Q.A. Engineer – Novell

Jun 2005 – Oct 2009

- Infrastructure & Test Automation: Designed and deployed automated QA frameworks for Platespin ZenWorks Orchestrator, standardized testing across multiple RHEL/SLES versions, accelerating the release pipeline.
- Critical Release Management: Served as a Hot-Patch Releaser for ZENworks Linux Management (ZLM), managing high-stakes security updates and ensuring zero-regression deployments for enterprise customers.

Linux Systems Specialist - TruLinux

Jun 2004 – May 2005

- Managed and secured network infrastructure to provide reliable remote access and support essential business services.
- Enhanced system stability and uptime by implementing automated processes for performance monitoring and traffic management.

Projects

- **YaCOMAS** Conference Management System platform PHP, MySQL CSS, XAJAX, JS. scaled from a one conference to an international solution used in several conferences across Mexico, LATAM, and Spain. https://github.com/patux/YaCOMAS/

Education

- Master's Degree in Information Technology, U de G, (Coursework completed)
- Bachelor's Degree in Computer Science, U de G, (Graduated w/Honors)

Certifications/Trainings

- AI4Devs: Online certified AI Master for Developers to scale dev productivity using AI tools and methodologies such as spec-driven development, MCPs, A2A, code quality, and advanced product building. impact-focused engineering mindset. - LIDR.co
- **Claude Code for Python Developers**: Hands-On Agentic Coding Course - Real Python

Skills

Leadership • Strong communicator • Mentorship • Agile/SCRUM • DORA Metrics • Platform Architecture • Cloud-Native Systems • Distributed Systems • Platform Delivery • DevOps Transformation • Engineering Leadership • Jira • Jenkins • Arctifactory • CI/CD • K8s • Docker • OpenStack • AWS • Infrastructure Automation • Release Engineering • Reliability Engineering • AI-Assisted Development • Python • Linux Internals and Packaging
