

Geronimo Orozco

Guadalajara, Jalisco, México | gorozco@gmail.com | [linkedin.com/in/patux](https://www.linkedin.com/in/patux)

Summary

Senior Software Engineering Manager with 10+ years leading global software, DevOps, and platform engineering teams and 20+ years in technology. Experience across Intel, IBM, and Novell, building cloud-native platforms, CI/CD ecosystems, and distributed infrastructure, improving engineering efficiency and release delivery by up to 40% through automation and cross-functional leadership.

Experience

Sr. Engineering Manager – Intel, oneAPI Installers & Packaging

Jul 2021 – July 2025, Zapopan, Mexico

- **Led a global team of 20+ DevOps, developers, quality engineers, and managers**, delivering Intel's flagship packaging infrastructure for oneAPI products, drove strategic planning, hiring, and rebuilding cross-team across US, EU, and APAC sites.
- Delivered automated CI pipelines supporting multiple distribution channels, **improving packaging velocity by 40%**.
- **Integrate and distribute Intel oneAPI installers, packages, and containers**, accelerating the distribution and adoption of Intel oneAPI, complying with security, SBOM, licensing, and meeting distribution standards.
- **Technologies:** CI (Jenkins, Github Actions), Git, Python, Ansible, Bash, K8s, Docker, Intel Internal Cloud, JIRA, Microsoft 365, Microsoft Copilot
- **Recognitions:** Successfully delivered major oneAPI releases (v2022.1 and v2022.2) under challenging conditions, ensuring timely market delivery and enhanced product quality and features.

Engineering Manager – Intel, System Stacks

Oct 2018 – Jun 2021, Zapopan, Mexico

- **Lead** a team of **12 engineers** to design and **integrate containerized software stacks** (OpenVINO, FFmpeg, PyTorch, HPC, Databases) optimized for Intel platforms that showcase Intel hardware for AI, Databases, and Media workloads, validated and published with high quality to DockerHub & AWS Container Registry.
- Team growth increased by 2.8x due to the project's importance. It expanded from 16 to 45 resources and three teams: Development, DevOps/CI & Validation, with three managers and two additional architects in their respective fields.
- **Recognitions:** Launching the Deep Learning Reference Stack to speed up development

Engineering Manager – Intel, Clear Linux Project

Jan 2015 – Sep 2018, Zapopan, Mexico

- **Lead the development of cloud-ready OS enhancements**, including support for Virtualization (KVM/QEMU), Docker, OCI, Kata Containers, OpenStack, and K8s
- Contributed to early versions of Clear Containers, later evolving into Kata Containers
- Took leadership of the Mexico team, comprising ~18 software engineers
- **Recognitions:** Delivering the first OpenStack Cloud App Hackathon in the Americas & Launching Kata Containers based on Intel's Clear Containers 3.0 technology

Cloud & Systems Engineer – Intel, Internal Cloud

Jun 2011 – Dec 2014

Architected hybrid cloud and automation solutions, serving as the lead Open Source expert to bridge bare-metal provisioning with resilient cloud infrastructure.

- **Co-Architect and developed Baremetal Provisioning Software** for Engineering teams at Intel based on .NET, C#, Visual Studio, Altiris, and PowerShell.
- **Designed and implemented a high-resiliency provisioning system** for the **Internal OpenStack hybrid cloud** with custom API extensions for Windows and Linux; Mentor for Linux, Git, Python, OpenStack and CI/CD

Systems Development Specialist – IBM

Nov 2009 – Jun 2011

Engineered and maintained high-availability infrastructure for the Web Identity Development team, specializing in automating complex AIX and cluster environment setups.

- High-Availability Management: **Orchestrated AIX and HACMP clustering, ensuring 24/7 uptime** for Web Identity systems through robust DB2, MQ, and WAS BKMs.
- Infrastructure Automation: Accelerate environment management by automating installation, configuration, and updates for middleware stacks and system clusters.

Q.A. Engineer – Novell/SuSE

Jun 2005 – Oct 2009

Contribute to the quality engineering and automation strategy for the company's enterprise Linux distribution and Grid computing products. Architecting and automating test environments, managing the full defect lifecycle, and ensuring the stability of critical release patches within a globally distributed Agile framework.

- Designed and developed automated QA frameworks for ZenWorks Orchestrator standardized testing across multiple RHEL/SLES versions.
- Served as a **Hot-Patch Releaser** for **ZenWorks Linux Management (ZLM)**, managing high-stakes security updates and ensuring **zero-regression deployments**.

Linux Systems Specialist - TruLinux

Jun 2004 – May 2005

- Built and maintained secure, high-growth network infrastructure, focusing on Linux connectivity and automation.
- **Network & Security:** Configured TCP/IP networks, managed SonicWall firewalls, and OpenVPN for secure remote access (Linux/Windows).
- **Automation & Performance:** Developed shell scripts for load balancing and dynamic routing; improved reliability via kernel tuning (iptables) and automated reconnection.
- **Infrastructure Support:** Managed core services (DNS, Samba, Asterisk), providing end-to-end support and fine-tuning for consistent network uptime.

Author, Lead developer - YaCOMAS

May 2004 – Nov 2013

- Architected a conference management platform using PHP, MySQL, CSS, XAJAX, and JS.
- Scaled the project from a local tool to an international solution used in dozens of conferences across Mexico, LATAM, and Spain. <https://yacomas.sf.net>

Education

- Master's Degree in Information Technology, Universidad de Guadalajara
- Bachelor's Degree in Computer Science (Graduated with Honors), Universidad de Guadalajara
- AI4Devs – AI Master for Developers (In Progress)

Skills

Leadership • Strong communications skill • Mentorship • Agile/SCRUM • DORA • Platform Architecture • Cloud-Native Systems • Distributed Systems • Platform Delivery • DevOps Transformation • Engineering Leadership • JIRA • CI/CD • K8s • Docker • OpenStack • AWS • Infrastructure Automation • Release Engineering • Reliability Engineering • AI-Assisted Development • Python • Linux
